Preparation for Bed Bugs

> For an effective bed bug treatment, please read and follow the Preparation Checklist below. **If the unit is not prepared as described, the treatment cannot be conducted.**

PREPARATION CHECKLIST

- ☐ Remove all electrical plates, cable and phone jack covers, and light switch covers. Place them in a tightly sealed bag (e.g. a Ziploc bag).
- ☐ Place all bedding, pillows and loose clothing in garbage bags and bring them directly to the laundry room. Put them in the dryer **immediately** on the highest heat setting (above 40 °C).
- ☐ All clothes in dressers and closets must be placed in bags and brought directly to the laundry room. Put them in the dryer **immediately** on the highest heat setting (above 40 °C).
- ☐ Remove all items from around and under the bed, as bed bugs will attempt to relocate.
- ☐ Vacuum the floor thoroughly. Immediately empty the contents into a bag and place it in an outside garbage bin.
- ☐ Do not bring in any new or used items until the follow-up service is completed.
- ☐ All occupants must leave **before the start** of treatment.
- ☐ All pets, except fish, must leave the premises for a minimum of **4 hours**. Fish aquariums should be covered and the filters disconnected.
- ☐ Children under one year of age and elderly persons should leave the premises for a minimum of **24 hours**. Anyone with a compromised immune system or under medical supervision should consult their family doctor if they have concerns about when to re-enter the premises.
- ☐ We recommend keeping the room in this state until the follow-up service is completed.
